Cage Nuts

- A Cage Nut (also known as a captive nut) is formed from a square steel nut in a spring steel cage which wraps around the nut. The wings of the cage hold the nut securely in a square hole. The nut floats in the cage to allow for panel misalignment. They allow for quick and easy assembly from one side of the panel.
- Cage Nuts have the traditional benefits of a versatile, widely-used, self-retaining fastener.
- Typical applications include racks and electrical equipment.
