

ADVANCE BRAND FASTENERS

G-Nuts

- G-Nut retainers eliminate the need for multiple tapped holes and is simply installed into a pre-punched hole by either clipping onto the flange, or sliding laterally until it aligns. The cage fully encloses the nut and serves as a shield against protruding raw screw ends.
- A special extrusion on the G Nut's mounting legs snaps into the mounting hole to provide positive retention until the screw can be driven.
- Typical applications include cabinet and electronic chassis assembly.
