

IFE is the Distributors choice for clamping and connecting products

Primary markets served include:

- Automotive
- Marine
- Heavy equipment
- Heavy truck
- ATV's
- Lawn and garden
- Agriculture
- Fluid storage
- Material handling
- Power generation
- Irrigation

IFE Americas, Inc. is a leading supplier of fluid systems components, offering a large range of connecting, clamping and tubing protection products. IFE and its distributors work closely together to meet technical challenges for our customers and reduce their cost of operation.

At IFE, solutions begin with quality products, manufactured in strategic locations and supported by our in-house technical center. Another key factor is our philosophy of teaming with our distributors, many of whom have been with IFE from its beginning.

IFE's experience has built strong relationships on partnership and mutual respect. We never bypass distributors by contacting their customers directly, or expect them to know IFE products as well as we do. When we work together and combine our strengths, everybody wins... especially the customer. And small and medium-size customers get the same level of technical support we offer billion-dollar companies.

IFE provides transportation industry with connection and protection products

Primary markets served include:

- Automobiles
- Heavy trucks
- Buses
- Heavy equipment

IFE has a long history in the automotive industry. In 1925, Volvo approached AB Pentaverken, an IFE owned company that produced the famous Penta marine engine, to develop and produce the first engine for Volvo cars.

IFE produced the 4 cylinder, 28 HP automobile engine along with the Penta marine engines, until exiting the engine business in the 1930s.

Today, IFE supplies connection and protection products for automobiles, heavy trucks, buses and motorcycles for both OE and aftermarket.

IFE offers products for traditional gasoline and diesel engines as well as electric (both battery and hydrogen) and CNG powered propulsion.

Contact us today and put our decades of experience to work for you.

IFE Americas is a global provider of sealing and retaining solutions to meet customer needs. We offer a wide range of clamps, couplings, straps, and sleeves, with in-house testing facilities and technical support.

IFE Product Range

IFE Hose clamps

- IFE-AS2 are commonly used for heavy truck and heavy equipment air intake systems and are available in multiple bandwidths.
- IFE-GS are designed to efficiently convert torque to clamping force while the band is non-perforated and has rolled edges so it does not damage hoses. IFE-GS clamps are also available with a built in spring for applications that require a dynamic clamp that can compensate for expansion and contraction due to thermal cycling as well as compression set.

IFE Mounting Products

- IFE-VMC are ideal for mounting CNG or hydrogen fuel cells while IFE-MS are used to hold tanks and large components securely. Let us work with you to select from our standard components and tools to develop a customized solution for your application.

IFE Protection Sleeves

- IFE offers a full range of heat shrinkable protection sleeves for automotive cables, wiring harnesses, rubber hose and plastic tubing protection.

IFE Product Range

Hose Clamps

IFE offers the following products in many sizes and materials.

- IFE-SS Swedish style worm drive clamps are made with all 316 stainless steel. The clamps have a solid band with a smooth underside and rounded edges to protect the hose against damage and ensure a perfect sealing. The housings are formed from a tube for strength and the one piece design insures high destruction torques and reliability.
- IFE-HD Heavy-duty European style 1 and 2-bolt hose clamps are suitable for hoses with steel reinforcement and high shore hardness. The 2-bolt version is excellent for larger diameters to insure even clamping force distribution. The band edges are rounded so that high clamping forces can be applied without damaging the hose.
- IFE-MC Mini clamps feature 9 mm bandwidth with rolled edges and that prevent hose damage. The bridge under the housing protects the hose while optimizing clamping force distribution. This clamp is an excellent choice for small diameter hoses and is available in all 304 stainless steel material.

Over 100 years of trusted marine industry experience

Born in the Swedish Archipelago in 1903, IFE developed their first marine inboard engine over 100 years ago. Named Penta, to represent the five engineers who worked to develop the original one cylinder, three HP engine. In 1916 the IFE owned AB Pentaverken produced Penta outboard motors in Sweden and sold them worldwide in the 1920s. AB Pentaverken also developed and produced automobile engines for Volvo before IFE exited the engine business in 1931.

IFE Group began making components for fluid systems in the 1960s. Never losing our passion for the marine industry, today IFE hose clamps and coupling products are found in pleasure and work boats worldwide. Our Swedish-style, worm-drive, hose clamps in all 316 stainless steel construction are used by OEM boat builders and refitters.

IFE clamps are available for purchase through our network of master distributors. Contact us today, we are happy to connect you with one.

IFE Americas is a global provider of sealing and retaining solutions to meet customer needs. We offer a wide range of clamps, couplings, straps, and sleeves, with in-house testing facilities and technical support.

IFE-GS

Worm Drive Clamps German style

IFE German style worm drive clamps deliver higher clamping force than American style clamps at less torque. That means heavy equipment, recreational vehicles, and lawn and garden equipment can often use one of these 9 mm band width clamps instead of a 1/2" American style clamp at substantial savings.

- 9 mm and 12 mm (heavy duty) band widths
- high clamping force
- rolled edges minimize hose abrasion
- non-slotted band eliminates hose extrusion
- best option for performance versus price
- corrosion-resistant W3 and W4 stainless steel (samples available)

IFE-AS

Worm Drive Clamps American Style

IFE-AS clamps are the traditional hose clamp design that is most popular in the Americas. IFE-AS clamps have a crimped or interlocked construction so clamps are not welded.

- Available in 1/2" (12.7 mm) bandwidth with 5/16" (8 mm) screw head as well as a micro version in 5/16" (8 mm) bandwidth and 1/4" (6.3 mm) screw head
- Stock material options include W2 (economy stainless steel band and housing with zinc plated carbon steel screw) and W4 all 300 series stainless steel.
- Liner version of the clamp is available with an inner liner that protects hoses and soft components from damage due to the slots in the band.
- Excellent design for holding signs, flags, small vessels and filters securely in place.

IFE-MC Mini Clamps

The IFE Mini Clamp features rolled band edges, preventing hose damage. The bridge under the housing optimizes hose protection and creates a more even clamping force distribution. The nut is retained even in cases when the 7 mm hexagon head screw is removed. The screw comes with a hexagon head. Band width 9 mm. This clamp is available in sizes from 6-8 mm up to 24-26 mm. It offers many benefits:

- W1 - Free from chromium VI and will withstand a minimum of 72 hours salt spray
- Available in all 300 series stainless steel
- Made according to DIN 3017
- Clamp is well suited for small diameter joints with thin wall hose like fuel hoses

IFE-SS

Worm Drive Clamps Swedish style

For optimum performance in critical applications, specify IFE's Swedish-style worm-drive hose clamps. These premium clamps are counted on around the world — on land and sea — for their strength, dependability and long service life.

- 1-piece tubular housing (non-welded) for maximum strength
- Smooth I.D. reduces hose damage and maximizes conversion of torque to clamping force
- Rolled edges protect hose from abrasion
- All AISI 316 stainless steel (band, housing and screw) for marine applications
- The choice of major yacht-makers in North America, Europe and Asia
- 2 band widths (10mm,12mm) and a wide range of diameters
